

# API Beginners Lab

Visit <https://fakestoreapi.com/> and read the documentation

1. Try to perform GET-requests for different resources from your browser.
  - Also try to include some query parameters in the request, for example limit the number of products
2. Now install a API-client of your choice like Thunder Client (Extension in Visual Studio Code) or Postman
  - Try to perform POST, PUT, PATCH and DELETE requests
  - Test out what happens when you make something wrong in the request

---

## Bonus!

Try and find any other open API and see what data you are able to retrieve.
